CMS

Clothing Management System

Nemad CMS is a complete procurement management system for workwear and personal protective equipment (PPE). With Nemad CMS, we set the standard in efficient operations for the supply of workwear and PPE.

What is unique about our system is that we combine the power of online with personal attention.

Nemad CMS

We offer an online system that has all aspects relevant to the issue of workwear and PPE. Nemad CMS is based on a secured procedure of budgeting, ordering, approval, delivery and reporting. The system can be fully customized to your needs!

Less costs

Paper administration is a thing of the past with the help of Nemad CMS. All information is available digitally. Internal processes are greatly simplified, reducing costs and saving time.

Greater efficiency

Nemad CMS simplifies the process from ordering to delivery to the user. All information is tracked: from individual sizing to return orders. The system remembers the order history of all garment wearers and their garment holdings. With Nemad CMS, you can set up the process as you wish.

Free fitting sessions!
Get assistance from our specialists.

Order anytime and anywhere. Real-time visibility into provided equipment and expenses.

How it works

Your staff is in need of a new clothing package. Depending on your requirements, you order for your staff member or the staff member does it himself at a budget determined by you. Each staff member has his/her own profile containing a comprehensive overview of his/her clothing package, sizes and PPE. When executing the order, the user is flexible in specifying the delivery address. The system facilitates internal approval, budget control, linkage to billing and reporting. Nemad KMS also records the service life of PPE and tools if required. When something needs to be replaced or inspected, a message follows automatically.

Step 1

Determine assortment and conditions

- Order within budget, region, department

Step 2

Set up online environment

- Adjust appearance to your corporate identity

Step 3

Release and set up page per user

- Carrier can (if desired) order itself

Step 4

Ordering and delivery

- Unlimited number of users

Step 5

Management and reporting

- Fewer errors, fewer returns
- Fits with any ERP system
